-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 November 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

1. Applicant's election without traverse of species I (claims 1-5) in the reply filed on 11/03/2005 is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 2 and 5 are rejected under 35 U.S.C 102(b) as being anticipated by Noguchi et al, US Patent No. 4,969,718.

The above claims are anticipated by Noguchi et al. figure 5A and accompanying text which disclose an active matrix LCD comprising:

Art Unit: 2871

- . first and second data lines (513, 514);
- . a first pixel electrode (522);
- . a second pixel electrode (517);
- . a parasitic capacitance between the second electrode and the second data line inherently three times greater than that between the first pixel electrode and the first data line (since the distance between the second pixel electrode and the second data line is shorter than that between the first pixel electrode and the first data line).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Noguchi et al, US Patent No. 4,969,718, in view of Fujiyoshi, US Patent No. 6,327,008.

Regarding the above claims, Noguchi et al. disclose the claimed invention as described above except for signals applying to the first and the second pixel electrodes are the same polarity and inverted for each two pixel electrode. Fujiyoshi does disclose applying signals having a same polarity and inverting for each two pixel electrodes as in figure 12A. Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ signals having a same polarity and inverting for each two pixel electrode in the Noguchi

et al display as shown by Fujiyoshi in order to improve a display characteristics (see Summary of the Invention).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
